Larry Gottlieb

President

ResinTech, Inc.

Phone: 856 768 9600

lgottlieb@resintech.com

Larry Gottlieb is president and chief technologist of ResinTech, a U.S. manufacturer of ion exchange products based in Camden, New Jersey. A 30-year veteran of the water treatment industry, he is responsible for research and development, quality control, and technical support for all ResinTech media products.

Larry joined ResinTech in 1989. In early 2000, he launched the Aries FilterWorks division of ResinTech, a business unit that makes filter cartridges and high-purity lab water systems. Later, he took over sales and operations for ResinTech's flagship division – media formulation. Larry was the driving force behind ResinTech's investment in the laboratory and R&D resources necessary to identify and remediate PFAS contaminants.

Today, ResinTech is arguably the world's leading provider of ion exchange solutions for PFAS remediation. ResinTech's lab services division employs more than 20 technologists in a state-of-the-art 6,000-square-foot laboratory. The company can identify over two dozen distinct species of per and polyfluoroalkyl substances at the part per trillion level.

Larry holds a degree in mechanical engineering from the University of Pittsburgh and is a board member of the Water Quality Association (WQA) and ASTM International Committee on Water and Environmental Technology.
